

MediMap Release Notes

Release Note Reference:	R3.3.2
Release Date:	2 nd Sept 2025
Downtime:	None
Product:	MediMap R3.3.2

Bug Fixes & Enhancements			
Type	Reference	Description	Users Who Benefit
Bug	MMTC-922	Editing a regular medication removes any pending stops If a charted line has a pending stop (set for a future date), editing the line for a regular medication will not affect the pending stop — it remains unchanged	ALL
Bug	MMCD-753	Administered Medications Retain Status After Prescriber Review Previously, if a charted medication was administered and then reviewed by a different prescriber, it displayed as edited and no longer appeared green in the administration page. This has been resolved — medications now remain green in the administration page after review, with no change to the time-reviewed tag.	ALL
Enhancement	MMCD-732	Medication administration report improvement A loading indicator now displays while the report is generated, and the search button is disabled until the process is complete. This prevents duplicate report generation and visibility.	NZ
Bug	MMCD-1026	Brand substitution check box on medication history does not display When adding or editing a medication and selecting “no brand substitution”, the same selection should show in the medication history.	AUS

MediMap Release Notes

Bug	MMTC-888	Printed Chart – Pending Start/Stop Display Previously, if a charted line with a pending start or stop was edited, the printed chart incorrectly showed the edit date/time as the pending stop. Pending start and stop dates did not display correctly. This has been resolved so the printed chart now shows medication status and pending dates accurately.	ALL
