| Product: | Medi-Map R3.0.10 |

| Bug Fixes | | | |
|-----------|-----------|---|-------------------|
| Type | Reference | Description | Users who benefit |
| Bug | MMCD-17 | <p>'No Brand Substitute' flag being automatically set for Rizatriptan</p> <p>Resolution: When editing a PRN medication, the brand substitution checkbox will keep previous status unless changed by the user.</p> | NZ |
| New | MMTC-140 | NHI number added to Medication Administrations by Therapeutic Group or Single Medication and Polypharmacy Report (Number of regular Medications) | NZ |
| Bug | MMCD-109 | <p>Service connections causing delay in eScript generation and does not complete</p> <p>Resolution: When generating an eScript that is successfully sent to NZePS but other service connections fail, then the prescription will still complete and generate, and other workflows will retry automatically until successful.</p> | NZ |
| Bug | MMTC-56 | <p>If a patient is discharged from a facility during a search period within a report it does not show that patient</p> <p>Resolution: When running a report where a patient has been discharged during the report dates the patient data will show for the period the patient was actively admitted to the facility</p> | NZ/AU |
